JOURNAL OF CRYSTAL GROWTH

Subject index

Ammonium
– sulphate 314
Aluminum
– arsenide 347
– nitride 135
Apparatus
– for critical flow rate measurements 221
– for melt growth
– – by Czochralski method
– – – of indium antimonide with floating crucible 251
– for quenching
– – by double layer Czochralski process 266
– for strain analysis 314
– for viscosity measurements
– – by torsion pendulum 334

Boron
– nitride 143

Cadmium
– sulphide 150
– zinc selenide 42
Calcite 94
Calcium
– carbonate 94
– phosphate 191
Cellular growth
– of shaped crystals 79
– of solids 221
Characterization
– by high resolution transmission electron microscopy 135
– by magic mirror technique
– – of surface defects in silicon 274
Computer simulation
– of convection 169
– of diffusion 191
– of growth kinetics in aqueous solutions 203
– of nucleation 228
Constitutional supercooling
– of shaped crystals 79
Convection 51, 169, 221, 266

Dendritic growth
– of germanium 101
– of solids 221
– of zinc bi-hydroxide 73
Device characterization
– electronic materials 34, 354
– heterojunction 34
– quantum wells 28, 42, 115
Diffusional control
– of cadmium in zinc selenide 42
– of dopants in indium antimonide 256
Dopants
– praseodymium in gallium arsenide 127

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 266, 307
Eutectic growth
– of polyethylene-acridine 321

Gallium
– aluminum arsenide 1
– antimonide 14
– arsenide 1, 115, 127
– indium arsenide 1, 115
– indium phosphide 251
– nitride 21, 135
– phosphide arsenide 1
Germanium 101

Heat flow control, of
– silicon sheets 51
Heterojunction, see Device characterization
Hydrodynamics, see Convection

Indium
– aluminum arsenide 28
– antimonide 251, 256
– arsenide phosphide 247
– gallium arsenide 28, 351
– gallium arsenide phosphide 115
– gallium phosphide 251
– nitride 135
– phosphide 105, 115, 351

Kinetics
– of growth 1, 21, 101, 115, 203, 209, 314, 351
– of interface control 1, 79, 266
– of nucleation 228

Lanthanum
– nickel oxide 158
Lasers, crystals for
– erbium pentaphosphate 238
Lead
– (II) n-decanoate 330
– (II) n-nonanoate 330
– (II) n-octanoate 330
Lithium
– niobate 79, 87, 307
Lysozyme 209

Melt growth technique
– by Czochralski method
– – of chromium doped lithium niobate 307
– – of indium antimonide 251
– – of oxides 169
– – of silicon 266
– – theory of heat flow 169
– by electromagnetic levitation
– – of germanium 101
– by floating zone method 341
– – of lanthanum nickel oxide 158
– – of silicon sheets 51
– by uniaxial solidification
– – of alpha-hexathienyl 241
Mercury
– cadmium telluride 261
Microgravity, growth under
– of calcium phosphate 191
– simulated floating zone 341
Morphological stability
– of germanium 101
– of interfaces 351
– of polyethylene acridine 321
– of quartz 300
– of zinc oxide 73

Nucleation 115
– of fcc crystals 228
– of ionic salts 182
– of lithium niobate 87
– of lithium niobate bubbles 79
– of zinc oxide 73
Numbers
– Grashof 169
– Marangoni 51, 341
– Peclet 169
– Prandtl 169, 341
– Rayleigh 169, 341

Phase diagram
– of boron nitride 143
– of lysozyme 209
– of polyethylene-acridine 321
Potassium
– chloride 182
– gadolinium tungstate 235
Precursor
– for aluminum arsenide 347
– for gallium nitride 21

Quantum wells, see Device characterization
Quartz 300

Silicon 51, 115, 266, 274
– carbide 292
– germanium 115
Solid growth technique
– by polymorphic transformation
– – of cubic boron nitride 143
Solution growth technique
– by electrocrystalization
– – of zinc oxide 73
– by flux method
– – of ammonium sulphate 314
– – of neodymium doped potassium gadolinium tungstate 235
– by gel method
– – of lead (II) n-octanoate, n-nonanoate, n-decanoate 330
– by hydrothermal growth
– – of quartz 300
– by low temperature method
– – of aqueous mixes in presence of impurities 203
– – of cadmium sulphide 150
– – of indium arsenide phosphide 247
– by low temperature method with magnetic field
– – of apatite 94
– – of brushite 94
– – of calcite 94
– – of calcium carbonate 94
– – of calcium oxalate 94
– – of calcium phosphate 94
– – of calcium sulphate 94
– – of cobalt phosphate 94
– – of gypsum 94
– – of hopeite 94
– – of iron phosphate 94
– – of magnesium phosphate 94
– – of manganese carbonate 94
– – of struvite 94
– – of vivianite 94
– – of whewellite 94
– – of zinc phosphate 94
– by vapor diffusion
– – of lysozyme 209
Superconductivity materials, high T_c
– bulk
– – of BSCCO whiskers 280
Superlattices, multilayers
– of III–V compounds 1, 28, 354
Surface energy, determination
– of potassium chloride 182
Surface morphology
– of gallium antimonide 14
– of lithium niobate 87

Surface structure
– of epitaxial silicon 274

Thin film growth, epitaxy
– by hot wall epitaxy
– – of zinc manganese selenide 286
– by liquid phase epitaxy
– – of gallium antimonide 14
– – of gallium arsenide 127
– – of lithium niobate 87
– by metalorganic molecular beam epitaxy
– – of gallium nitride 21
– by molecular beam epitaxy
– – of 3,4,9,10 perylenetetracarboxylic dianhydride 65
– – of aluminum arsenide 347
– – of aluminum nitride 135
– – of cadmium zinc selenide 42
– – of gallium nitride 135
– – of indium aluminum arsenide 28
– – of indium gallium arsenide 28
– – of indium nitride 135
– – of mercury cadmium telluride 261
– – of zinc selenide 34
– – theory of cadmium diffusion in zinc selenide 42
– by vapor phase epitaxy
– – through metalorganic chemical vapor deposition
– – – of gallium arsenide 1, 115
– – – of gallium indium arsenide 1, 115
– – – of gallium indium phosphide 251
– – – of gallium phosphide arsenide 1
– – – of indium gallium arsenide 351
– – – of indium gallium arsenide phosphide 115
– – – of indium phosphide 105, 115, 351
– – – of silicon germanium 115
– – – of zinc selenide 34

Vapor growth technique
– by chemical transport
– – of 4H-silicon carbide 292

Whisker growth
– of BSCCO 280
– of zinc oxide 73

Zinc
– manganese selenide 286
– oxide 73
– selenide 34, 42
